## ► Overflow Property

The **overflow** property specifies whether to add scrollbars when the content of an element or to clip the content which doesn't fit in the specified area. The overflow property **only works for block elements with a specified height**.

The overflow property has the following values:

- **visible**: Default. The overflow is not clipped. The content renders outside the element's box.
- **hidden**: The overflow is clipped, and the rest of the content will be invisible.
- **scroll**: The overflow is clipped, and a scrollbar is added to see the rest of the content.
- **auto**: Similar to scroll, but it adds scrollbars only when necessary.

## ▶ overflow-x and overflow-y

### overflow-x and overflow-y

- The overflow-x and overflow-y properties specify whether to change the overflow of content just horizontally or vertically (or both)

CLARUSWAY  
WAY TO REINVENT YOURSELF

```
HTML
CSS
div.first {
  background-color: lightblue;
  width: 300px;
  height: 100px;
  overflow: hidden;
  margin-bottom: 10px;
}
div.second {
  background-color: lightgreen;
  width: 300px;
  height: 100px;
  overflow-x: hidden; /* Hide horizontal
  scrollbar */
  overflow-y: scroll; /* Add vertical
  scrollbar */
}
```
